

Environmental Monitoring of Critical Equipment

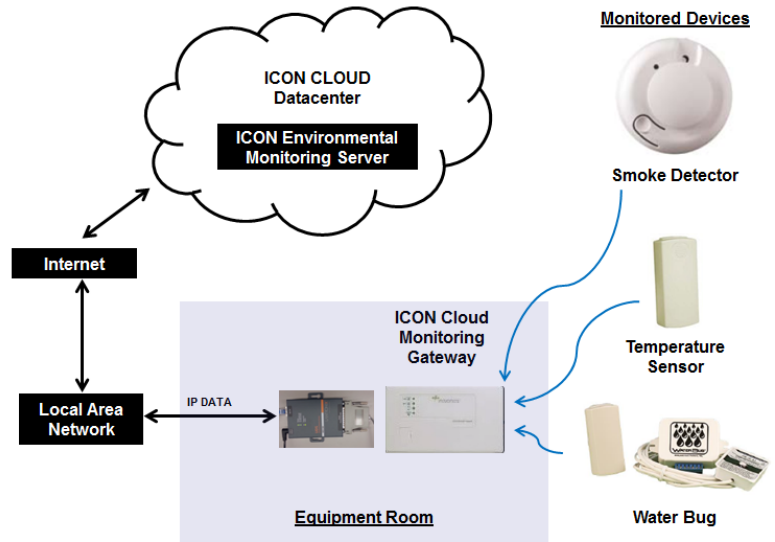

Most companies have some form of a business continuity strategy in place. However, many companies do not have a clear plan in place to be alerted of an unexpected environmental disaster. This important consideration is often overlooked or deemed not affordable.

Have you considered the impact to your business...

- If a pipe bursts overnight and water damage occurs to critical systems in your equipment closet?
- If your telephone system or computers were down for one or more days due to an environmental disaster?

Monitor your critical equipment from the cloud

ICON Cloud Solution's Hosted Environmental Monitoring Service includes three sensors for temperature/humidity and water intrusion designed to cover an equipment room area. Additional sensors can be added and coverage areas increased as needed. In the event of a water leak, HVAC unit failure or other such situations you can be notified via phone call, text or email.

Environmental monitoring can also help to reduce insurance premiums

Having sensors and an alert system in place that proactively warn you of an impending environmental event can also save you dollars on your insurance premium.

ICON Cloud Solutions has you covered!

Are you prepared for the unexpected? If not, ICON Cloud Solutions can help you prepare for the unexpected to help ensure an environmental disaster doesn't cripple your ability to conduct business.

Call today or visit <http://www.iconcloud.com/business-continuity-solutions-1/> to learn how we can help you with environmental monitoring of your critical systems for just a few dollars a day!
