

Advantages of **ICON CLOUD**

5 reasons your company will benefit from **ICON Cloud**.

1

Call Quality — “40% Better”

ICON Cloud delivers improved call quality through the use of VPN connections. Studies have shown that VPN-based calls across the same network will result in up to 40% better call quality.

2

Choice — “You make the call”

“Generic” solutions limit the customer to predetermined configurations with limited flexibility. We don’t put limits on our customers. We work with them to determine the solution that best fits their needs.

3

Security — “We’ll keep you safe”

We use VPNs, (Virtual Private Networks) allowing customers to securely communicate through the Internet or public networks, by utilizing a combination of encryption and security protocols.

4

Engineered Solution — “One, not many”

Unified technology engineered and built by one company so every component, telephone, device and application operates as a seamless end-to-end solution.

5

Single Source Support — “We’ve got you covered”

One point of contact that understands the solution and can quickly troubleshoot issues to resolution – a single call resolution.

About ICON Cloud Solutions

ICON specializes in cloud and customer based voice, video and unified communications platforms. Design, integrate, communicate and collaborate with ICON.
